**Part I**

**Partie 1**

## 1 Business needs

### 1.1 Feature Information

The first part of the document should provide information about the following items in a form of a table :

- **Deadline/Due Date** : Provided by the Business, this limit give information to the TL/DEV of the time allowed for the new feature. It should be written in full letter for avoiding confusion between different way of writting the date.  
For example : 12 September 2023.
- **Business need summary** : Provided by the Business, this row should indicate in one or two sentence the general goal.  
For example : I want the users to be able to pay.
- **Priority** : Provided by the PO/PM, this row should indicate how important is the feature on a range from 0 to 10.  
For example : 10 (very important) - 0 (optionnal).
- **Jira** : Provided by the TL, this row should contains the link poiting to the Jira story related to this feature.
- **Reporter** : The person who is requesting the feature. This information make it easy to know who to ask information to.

For example :

Deadline	12 September 2023
Business need summary	I want the users to be able to pay
Priority	7
Jira	http://www.example.com

### 1.2 Scope

This part fill up by the PO/PM should indicate what inside this feature is the minimum required (MVP), the nice to have and the part outside of the scope.

For example :

MVP	The users need to be able to pay with a credit card 3D Secure
Nice to have (optionnal)	The users can pay with paypal
Outside of scope	The users can pay with bitcoin

### 1.3 Problem Statement

This section will give the necessary information for understanding the functional requirements or modification of the UI. Any person should be able to grasp the idea of the feature and the improvement just by reading this section.

#### Actual state of the system

In the case of a refactoring or improvement of a feature already present in our system, PO/PM/PM should describe the part that gonna be improve. This section highlight the actual way the system is working or should be working and put everybody on the same page. Dont hesitate to put image, graph or any document that could be interesting.

#### Problem/Improvement to do

In this section, PO/PM/PM/Business should described what is the problem or the improvement to make on the actual system described in the previous section.

#### Final state of the system

In this section, PO/PM/PM/Business would described the result needed. With the previous sections, it will become easy to compare the actual and final state of the system by highlighting the differences.

## 2 Limitation and impacts

### 2.1 Product consideration

In this section, PM/PO will described the resulting effect of this new features with the actual system. The part of the system that will be impacted by such new feature.

For example :

If the goal of this feature was to remove a plan. The PM/PO should let everybody know that the current users using this deleted plan will be impacted and tell the TL and DEV what to do about those users.

### 2.2 Technical consideration

In this section, TL will described the limitation and the effect on other parts of the system of the new features.

For example :

If the goal of this feature was to remove a plan. The TL will let the PO/Business know that such feature is impossible without managing the user under this plan. Stripe does not allow that.

## 3 Before development

### 3.1 Wireframe

Depending of the feature, a front UI might be needed. In this case, wireframes should be provided before the implementation for creating endpoint close of UI. This requirement helps the frontend and backend connect easily their implementation.

### 3.2 Milestones/KPI

In this section, the PO/PM/DEV/TL will describe the milestones that the developer of the feature has to achieve to validate the KPI of the entire feature. By exploding the feature into milestones, it becomes easy to see the agile step of the development and what part could be split into multiple developers.

## 4 After development

### 4.1 Validation Process

In this section, Business/PO/PM/QA should provide the explicit steps that will be executed for testing the features. Items does not need to be enumerated and can also does not have any relation between each others.

For example :

1. Make sure on first login the prompt is shown.
2. Do not accept, logout and login and make sure it is still shown.
3. Try to click the accept button without checking the box.
4. Check the box and click the accept button now.
5. Logout and make sure the prompt is not shown, make sure in DB the version of the last accepted version was saved.
6. Upgrade the version of the text, make sure the prompt is now shown again.

### 4.2 Deployment

In this section reserved for the DEV, you will find any information relative to the deployment of the feature on production such as the environment variables to add in the .env file of the production server, any command to run on the production server when the feature has to be merged...

## **Glossary**

**Business** is any person from the sales teams.

**DEV** is any person responsible for the development of the features.

**PM** is a Product Manager.

**PO** Is a Product Owner.

**QA** is any person from the quality assurance teams.

**TL** is the team leader of the backend or frontend team.
